Lab Exercises 9

9)A school application wants to create a package studentInfo with class Student having method displayInfo(). Import and use it in another file.

Program:

```
class Student {
    void displayInfo() {
        System.out.println("Student Name: Sai");
        System.out.println("Course: Computer Science");
    }
}

public class collage {
    public static void main(String[] args) {
        Student s = new Student();
        s.displayInfo();
    }
}
```

Output:

```
C:\Users\Administrator\Desktop>javac collage.java

C:\Users\Administrator\Desktop>java collage
Student Name: Sai
Course: Computer Science
```

Result:

The program is executed successfully.
